Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus.

Most people who fall sick with COVID-19 will experience mild to moderate symptoms and recover without special treatment.

HOW IT SPREADS

The virus that causes COVID-19 is mainly transmitted through droplets generated when an infected person coughs, sneezes, or exhales. These droplets are too heavy to hang in the air, and quickly fall on floors or surfaces.

You can be infected by breathing in the virus if you are within close proximity of someone who has COVID-19, or by touching a contaminated surface and then your eyes, nose or mouth.

Tests

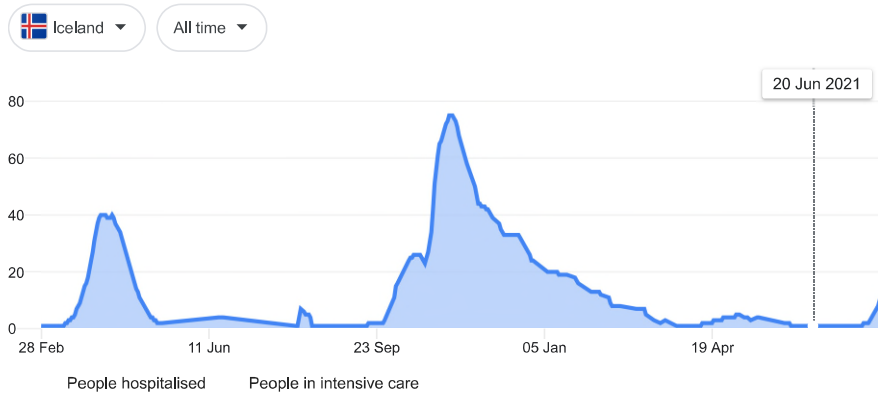

From [Our World in Data](#) · Last updated: 1 day ago · Based on seven-day average

* Positive tests are estimated by multiplying tests taken by the positivity rate. Positive tests may not be equal to positive cases because of reporting differences and people taking multiple tests. · [About this data](#)

Hospitalisations
