We never needed a vaccine

Using early treatments we can get to zero COVID quickly.

Uttar Pradesh in India is now COVID-free.

Vaccination rates there are miniscule.

Censorship required

The way to fight truth is using misinformation, intimidation, mandates, and censorship.

Our government is ignoring early treatments and tells everyone that early treatment don't work. They demonize the key treatment used by India to be COVID-free. Their agenda is to push the vaccine, not to cure COVID.

Social media companies will censor, demonetize, and/or ban you for telling the truth. If you are a doctor, you can have your license revoked if you say the vaccines are unsafe.

"We Are Killing More People Than We Are Saving With The Shots"

This Tweet is unavailable.

8 96 168

The tweet was 2 minutes of my public testimony at VRBPAC. After 790K views and 10K retweets, Twitter forced the author to remove the video clip. Twitter is endangering lives by blocking the truth from people.

**Here's how we compute
the 2:1 ratio that shows the
vaccines are nonsensical**

V:C defined

V:C is the ratio of the the number of vaccine-caused deaths (V) relative to the projected number of COVID deaths (C) that could be saved by the vaccine over a 6 month period.

A number like 2:1 means we kill 2 people for every COVID death we save. That's bad.

For a COVID vaccine to be viable, you're looking for V:C of 1:x where $x > 100$, i.e., you want the risk to be very small compared to the benefit. If you are saving the lives of $>100,000$ people, you don't want to have to kill $>1,000$ people to have to do that. That would completely unacceptable in a civilized society and would be unprecedented in modern times, especially when we have early treatments that work with over 99% risk reduction that don't have any safety issues.

V:C varies by place, time, age

V:C depends on the vaccine type, the rate of COVID deaths in your community at a particular time, and your age. For this presentation, we'll compute this as a country-wide average for the US.

Determining V

In general, the three vaccines in the US work through a very similar process. The vaccines have an estimated death rate of ~411 deaths per million doses. This is close to 1 death for every 1,000 people who are fully vaxed. So V can be calculated just based on the vaccine type for an average population.

We can calculate a deaths per million doses based on each age range (e.g., using VAERS). For risk / reward assessments done by age, this would give more precise estimates.

In this presentation, we are using $V=411$ D/M as an overall average over a population.

Estimating C

C, the projected number of COVID deaths saved per million doses, can be estimated based on the number of COVID deaths in the last 6 months.

From the [CDC weekly data](#), there were 112,835 COVID deaths from 2/27 to 8/28.

We can make a back of the envelope estimate for C by assuming 60% the population was unvaccinated and vaccine would reduce that death rate by 90%. We then have 101,551 deaths saved/393M doses = 258

V:C in the US = 1.5:1

D/M from the vaccine = 411

D/M from COVID = 258

Therefore, using this estimation method, in the US today, we kill **1.5** people (411/258) to save a single COVID death over the next 6 months.

This is the inconvenient truth that nobody wants to talk about.

We'd have to be wrong by more than 100X for this vaccine to be justifiable.

Is the vaccine safe for some age groups?

Even if overall the vaccine is unsafe, it might still have a positive risk / benefit for people in a certain demographic.

The CDC/FDA think the vaccines are perfectly safe and have killed no one, so they have never done this analysis. For example, the VRBPAC unanimously approved boosters for people over 65.

None of the panel members made the risk-benefit calculation as far as we know. They were guessing.

Were they right? No. They were dead wrong based on our calculations and real-world evidence.

Here's what [the detailed calculations showed...](#)

V:C in the US is not favorable for any age

The table shows the V:C numbers by age.

You can [read this article](#) which details how these numbers were estimated.

So for kids, we kill over 6 kids to save 1 kid from a COVID death. Mandating vaccination for anyone, especially school-age children, is proof of a corrupt society.

Therefore, it's nonsensical to vaccinate any age group. The FDA VRBPAC committee concluded that there is a benefit for 65 year old and older, but they refused to consider the mortality caused by the vaccine in their deliberations.

Age	V	C	V:C
20-30	67	11	6.1:1
30-40	121	31	3.9:1
40-50	210	76	2.8:1
50-60	436	185	2.4:1
60-70	1031	450	2.3:1
70-80	2140	1133	1.9:1
80+	6276	3458	1.8:1

Validation

Germany found boosters were too deadly

This is a brief from a regional association of physicians in Germany to their members informing them about an incident in a nursing home where 90 inhabitants were given the third booster shot. Out of this resulted 1 death, 2 resuscitations, and 9 critically ill with cardiopulmonary symptoms.

“Given the fact that neither German authorities (PEI) nor European Medicines Agency EMA has approved this booster,” the association is urging the members to seriously reconsider the need for a booster as of now.

COVID-19 (Stand 07.09.2021)

Sehr geehrte, liebe Kolleginnen und Kollegen,

kurz eine sehr **wichtige Info** zum Impfgeschehen!

In Oberhausen hat es nach Durchführung von 90 Auffrischungsimpfungen in einem ASB Haus zahlreiche schwere Komplikationen, davon ein Todesfall und 2 Reanimationen gegeben.

Insgesamt sind von 90 Impfungen 9 heftig erkrankt, überwiegend mit kardiopulmonalen Problemen. Entsprechende Meldungen an das Paul-Ehrlich-Institut, das Gesundheitsamt und die KVNO sind erfolgt, die notwendigen Untersuchungen laufen.

Wir müssen Sie zeitnah über die Vorkommnisse informieren, zumal weder eine arzneimittelrechtliche Zulassung durch die EMA noch eine STIKO Empfehlung für diese Auffrischungsimpfungen derzeit existieren!

Ich möchte Sie herzlich bitten, selber ärztlich zu entscheiden, ob Sie nicht lieber auf die Zulassung oder Empfehlung warten wollen, oder Sie diese Auffrischungsimpfung tatsächlich für so dringlich halten, dass diese auch ohne Empfehlung der STIKO oder CoronaImpfV-konforme Zulassung durchgeführt werden müsste.

Wir halten Sie natürlich auf dem Laufenden.

Mit herzlichen Grüßen

Ihre

Nursing home: too deadly

4 dead/7 hospitalized after Pfizer Booster
Potential benefit: Save 1 life from COVID

Death:Life = 4:1

Assumptions:

1. [3% IFR for elderly](#) and 30% get COVID in a year
2. Booster lasts for 6 months

[Sunnycrest nursing home](#)
Whitby, Ontario, Canada
136 beds

Six Month Safety and Efficacy of the BNT162b2 mRNA COVID-19 Vaccine

[Comments \(186\)](#)

Stephen J. Thomas, Edson D. Moreira Jr., Nicholas Kitchin, Judith Absalon, Alejandra Gurtman, Stephen Lockhart, John I. Perez, Gonzalo Pérez Marc, Fernando P. Polack, Cristiano Zerhini, Ruth Bailey, Kara A. Swanson, Xia Yu, Sa

Re During the blinded, controlled period, 15 BNT162b2 and 14 placebo recipients died;
Pe during the open-label period, 3 BNT162b2 and 2 original placebo recipients who
K: received BNT162b2 after unblinding died. None of these deaths were considered
dt related to BNT162b2 by investigators. Causes of death were balanced between
T BNT162b2 and placebo groups (Table S4).

Pfizer Phase 3: 6 month study result

THE most definitive study on
all-cause mortality

Group	Deaths
Placebo	14
Vaccine	15

V:C = 2:1

in Pfizer's own trial

The trial had just 2 COVID deaths in placebo group and 1 in the treatment group. Therefore there was only 1 COVID death saved. Overall there were 15 deaths in the treatment group; 14 in the placebo group.

The COVID benefit was more than offset by 4X higher number of deaths from heart attacks. Bottom Line: We killed 2 to save 1, leading to a net loss of 1 life.

Note that the Pfizer trial matches our estimate.

Note: The numbers in Pfizer's study are not statistically significant because the study was never powered to show a death benefit. So this is not conclusive. It is just "interesting."

Oahu nursing homes

Hale Nai = 288 and Avalon = 108 residents

They lost almost 10% of their residents from the vaccine and ~ 2% from COVID.

The whistleblower, Abrien Aguirre, was fired for disclosing this.

Here's his [original interview](#) and [my extended interview](#).

Here is a [discussion of patients are dying from the vaccine and not COVID](#).

WATCH

Abrien Aguirre

Vaccination is nonsensical

Vaccines, mandates, and boosters are all nonsensical. We have 2:1 V:C ratio, but need at least 1:100 to be viable.

If we want to end the pandemic and get back to normal, we should copy what Uttar Pradesh did.

They didn't rely on vaccination at all.

They used early treatment.

If we don't want to end the pandemic, we should keep mandating vaccination over and over again, just like Israel.

Vaccination
vs.
Early treatment

Vaccination is not the solution

Vaccination is making things worse, not better.

In Israel, cases are now at an **all-time high** and that's after the third boosters have been rolled out.

We never needed a vaccine

Uttar Pradesh is now COVID free because they embraced early treatments.

Unfortunately, in the US, the NIH says these don't work despite multiple systematic reviews and meta analyses published in peer-reviewed journals, the highest level of evidence-based medicine (EBM).

The FDA ignored all this data. The vaccine is the only solution they will consider in their risk benefit analysis. **NOBODY** in the VRBPAC advisory committee said one word about early treatment in their meeting on Sept 17 when they approved a 3rd dose of Pfizer for those over 65. They don't believe the vaccine causes any deaths at all and they can't explain any of these anecdotes.

Horowitz: Heavily vaccinated state accounts for 65% of India's COVID cases after rejecting ivermectin

DANIEL HOROWITZ | September 17, 2021

Kerala by contrast...

The Indian state of Kerala has 3% of India's population, and 67% of its inhabitants have at least one vaccination. One would expect Kerala's COVID cases to be so low as to be invisible in a chart of India's very low overall cases. Yet this state of just 33 million people accounted for 65% of all of India's cases on Thursday, and even more in recent weeks. It has essentially been the only state experiencing a surge in recent months. It also happens to be the Indian state that has rejected ivermectin.

Early treatment benefits

No masking

No social distancing

No more lockdowns

No more mandates

Early treatment benefits

1. Higher relative risk reduction (over 99%)
2. Simple prophylaxis protocols be used to prevent infection with up to 100% success without the use of any drugs whatsoever
3. Greater safety (minor temporary side effects, known safety profile)
4. They lower both all-cause mortality and all-cause morbidity
5. They work equally well on all variants
6. They do not promote escape variants
7. They do not cause vaccine enhanced infectivity/replication
8. They do not risk original antigenic sin (linked-epitope suppression)
9. They do not cause prion diseases
10. They prevent long-haul COVID syndrome nearly 100% of the time
11. They enable people to acquire recovered immunity which is up to 27X stronger and more durable than vaccine-induced immunity

What about the victims?

Their lives are destroyed

Many injured so badly can never work again

Compensation paid by US government = 0
